

Laser labelling: Logo file requirements

For individual laser labelling, we need the desired logo as a vector file, e.g. in EPS or AI (illustrator file) format. Pixel data, such as jpg files, are NOT suitable.

Please note when selecting a logo the maximum usable area for individual products:

WS1000 Style, KNX WS1000 Style:	width 40 mm, height 4.5 mm
WS1 Style, Touch One Style:	width 40 mm, height 3.5 mm
Corlo Touch KNX:	width 20 mm, height 2.2 mm

We will check whether the data you have supplied can be used and report back to you on the technical and design feasibility of the order.

The devices are labelled only with the supplied logo (no product name as with e.g. the standard version of the WS1000 Style). A credit note is not acceptable for personalising the product.

Note when using graphics:

The client is solely liable if rights, in particular third party copyrights, are infringed by executing its order. The client shall hold Elsner Elektronik harmless from all third party claims arising from such a breach of rights.
